

## PerfectPrimer IronBack®

### The Complete Rust Conversion and Paint Prep Coating

**IronBack®** converts rusted steel into paint-ready metal in four ways in a single step, without grinding or sandblasting.

#### What does this coating do?

Our unique technology converts rusted steel into stable, black metal, removes oxygen bubbles trapped in the steel to prevent future rusting, and encapsulates the metal with a corrosion protective barrier. It primes rusted and non-rusted steel alike and binds with your water or oil based paints.

#### Benefits of IronBack®:

- Saves money through faster, easier application
- Eliminates grinding and dangerous sandblasting
- Contains no VOCs. Non-toxic. Environmentally friendly
- Converts and encapsulates steel to prevent future rusting
- Easy to use, creates a ready to paint, rust-free surface
- Compatible with water and oil-based paints
- Ready to use, cleans up with water
- Eliminates "Tannin Bleed"

**Application instruction:** Use a scraper or wire brush to remove all loose debris and paint. In saltwater environments, rinse steel with water. Spray or brush IronBack® on dry surfaces only. A second coat can be applied within 30 minutes if needed. Allow 24 hours to cure before painting.

Coverage: 300 square feet per gallon.

**IronBack® the only all-in-one solution to prepare rusted and non-rusted steel surfaces for painting.**
